

## Recommendations of the Future Energy Conference – Amman

04-05/11/2018

- Localizing the renewable energy techniques via supporting the manufacturing of the renewable energy parts and components.
- Qualifying and training the technical cadres required for establishing, sustaining and maintaining the renewable energy systems.
- Preparing the energy efficiency projects for the purpose of reducing the energy cost required for the different needs. This will take place through specialists in this field, adopting the demand from the competent bodies, and developing the technical specifications required for the different renewable energy systems in order to contribute to localize these industries, and maintain good use.
- Submitting applications to the competent governmental institutions to exempt the renewable energy components, and systems from customs duties in addition to any other fees.
- Requesting the engineering authorities in the Arab World to prepare the systems of energy specialized offices along with activating the same in order to increase the energy usage efficiency in the Arab World.
- Reflecting the electric energy production on consumers together with supporting poor categories through direct support, not the electric tariff.
- Emphasizing the importance of approving the energy management systems and preparing the relevant approvals.
- Mainstreaming the usage of the ground energy systems in public buildings and defining their required specifications in accordance with the Palestinian experience.
- Continuing the exchange of technical experience among the engineering authorities in the Arab World through workshops and conferences.
- Preparing the operational studies required for electric networks in order to ensure the safe operation in the light of the existence of renewable energy systems.
- Developing the energy item, which shall entirely be allocated for clean energy projects as well as the technical support of these projects.
- Activating the control of the energy efficiency card, and preparing an automatic system, database and barcode system in order to perfect the efficiency of cards affixed to equipment.
- Establishing neutral laboratories to approve the testing results of equipment and benefitting from the Egyptian experience, and experiments in this field.
- Establishing a joint Arab market for energy represented by the official bodies entrusted with the energy file in the Arab States together with engagement of the Federation of Arab Engineers and Engineers' Syndicates in the states participating in this market.
